

Joshua A. Davis, EA, FSA, MAAA

**Principal Consulting Actuary
Cheiron, Inc.
Portland, Oregon**

Mr. Davis is a principal consulting actuary with Cheiron, Inc. He specializes in Taft-Hartley sector consulting, development of modeling techniques and risk neutralization strategies. As the lead consultant on many large multiemployer pension plans, Mr. Davis routinely uses interactive projection tools to help trustees understand trade-offs when creating and updating rehabilitation plans, funding improvement plans and funding benefit policies. He is also the main developer of Cheiron's stochastic forecast program, R-Scan, which allows trustees to interactively explore the risks embedded in their pension funds and make decisions based on risk-mitigation frameworks. Mr. Davis' focus, when developing tools for Cheiron and his clients, is to allow trustees to quickly gain a deeper understanding of their plan's dynamics and to promote discussions regarding the balancing act between benefit security and benefit levels.
