

Bill W. Massey, Ph.D.

**Chief Medical Officer
Blue Genes
Statesboro, Georgia**

Dr. Massey is a neuropharmacologist, pharmacogeneticist, life sciences professional, senior executive, inventor and entrepreneur. He is currently the Chief Medical Officer for GTI Laboratories. Dr. Massey received his Ph.D. in Pharmacology at the University of Arkansas for Medical Sciences. He conducted his post-doctoral research at The University of Chicago's Pritzker School of Medicine. Subsequently, Dr. Massey joined the AstraMerck Group of Merck and Company culminating his career as head of CNS Regulatory Affairs. After Astra Merck, Dr. Massey held senior management positions at Quintiles and AstraZeneca. In 2011, Dr. Massey became the Jack Martin, MD Professor of Psychopharmacology at Vanderbilt University, where he conducted research into the genetics, biological basis and pharmacological treatment of schizophrenia and serious mental illness. Following his tenure at Vanderbilt, Dr. Massey has been involved in leading PGx and personalized medicine companies. Dr. Massey currently holds adjunct faculty appointments at the University of Arkansas for Medical Sciences and the University of Mississippi Medical Center. He continues to conduct and publish globally-recognized research in the areas of neuropharmacology, mental illness and pharmacogenetics.
